

BABCOCK 4000 WASHERS

The Garver test bottle washer is extremely lightweight, compact, and is unlike other washers in that it doesn't require a permanent connection. The unit is designed to sit in the sink basin during washes, and then stores conveniently in a cupboard out of the way when not in use. The Garver test bottle washer quickly pays for itself by reducing operator labor, preventing test tube breakage, and test tube inventory. The washer features acid resistant aluminum base and top, and, durable nickel plated water manifold and spray stems. Rubber cushions at the base of the spray stems prevent glassware breakage. The unit will wash and rinse 12, 24, or 36 bottles in as little as 2 minutes. Hot water and a good alkaline powdered detergent is essential for best results.
