

a_w -measurement simple as never before!

For more than 50 years Novasina is the leader in the production of precision instruments for water activity measurement in foodstuff, processed food as well as pharmaceutical, chemical products and

cosmetics. Thanks to a longstanding experience and research and development we are able to offer today reliable, high quality "Swiss made" products that set new standards in the water activity measurement.

LabTouch-aw

Smart water activity measurement device

Let's welcome the next generation of high quality **water activity meters** made by Novasina. Touch a new world, driven by the ease of use and fast menu access by a **touch-screen** combined with a **semi-temperature-stabilised** measurement chamber for consistent and reproducible measurement results (a_w -value). The latest sensor and measurement technology coupled with re-useable humidity calibration standards provide a very economical solution to precision water activity measurements. Furthermore, the standards are an easy method for double-checking the instrument and sensor's high performance.

The **LabTouch-aw**, with its ergonomic design and the touch-screen, makes water activity measurements easier than ever before. Semi-temperature-control and active sample temperature measurements, by an integrated infrared sensor, provide the highest possible reliability of measurements.

All measurement data, including the important protocols are stored on a SD card and can be transferred to a PC or printer. Special software is available for viewing results and analysis of the data. This assures confidence in readings for quality assurance and traceability of all measurement values.

In summary, the **LabTouch-aw** assures high measurement accuracy and reproducibility, long-term stability, ease of use and an economical measurement system. Get ready for the new standard for **aw-value** measurement
