

HI 8633 and HI 8733

Multi-Range Conductivity Meters for Laboratory Use

Features ...

HI 8633 and **HI 8733** have been designed specifically for use in the areas of production and quality control. It is often necessary to test samples with different concentrations ranging from deionized water to brine. The amperometric system would require constant recalibration and probe changes, thus making the measurement process very time consuming and unreliable. To solve this problem Hanna has developed the **HI 8633** which uses a 4-Ring potentiometric probe. The rugged probes made in PVC, are ideal for indoor as well as outdoor measurements.

By using one point calibration, it is now possible to obtain accurate readings across a very wide range from 0.1 to 199900 µS/cm.

If the temperature of the solution fluctuates, the **HI 8733** with a built-in temperature sensor and Automatic Temperature Compensation, is the perfect instrument.

As an accessory, the **HI 721313** is available. The kit includes a rugged carrying case with a beaker, a calibration screwdriver and standardizing solution at 12880 µS/cm.
